Digitization of Insurance

- Life insurance policies have the lion's share, followed by vehicle protection, health and travel. A report from BCG shows that by the year 2020, digital insurance will grow by 2,000 per cent from its current state, with a total turnover of Rs 15,000 crore. Furthermore, it is also said that in 2-3 years, 75 per cent of insurance purchase decisions will be powered by digital channels. This prediction has been proved by a consumer trend analysis conducted by Google, which showed that since 2008, there has been a growth of 450 per cent in the number of users searching for life and health insurance policies and related information online while the cumulative growth witnessed by the insurance industry is that of 600 per cent over the past five years.
- Digitisation is expected to be a long-drawn-out process, which will be rolled out in phases as per regulatory guidelines, but it will definitely be a uniform experience for each and every stakeholder.
