

Corona Virus (Covid-19) Antibody Test available at **ScanGene Labs** @750 Rs.

ICMR
Approved

Uses/Application

This is a qualitative test for detection of IgM/IgG antibodies against Covid-19 in human blood/serum/plasma samples. This test is intended as an aid in the determination of immune reaction to Covid-19.

Specimen Collection

Whole Blood in Plain or EDTA vials.

Reporting Time

Same day if sample collected before 6.00PM.

Specificity & Sensitivity

The specificity and sensitivity of kit is 97.8% and 97.1% respectively.

Result Interpretation

Should be done by medical professional.

Testing Platform/Methodology

The principle of Covid-19 IgM/IgG antibody test is an antibody capture immunochromatographic assay for the simultaneous detection and differentiation of IgM & IgG antibodies against Covid-19 virus in human blood/plasma/serum samples.

Important:

- Report/result should be interpreted by qualified medical professionals in conjunction with other diagnostic procedures and clinical findings.
- This test kit is not for diagnostic purposes.
- Test may come positive after 7-10 days of infection and may remain positive for several weeks post infection.
- Positive test indicates exposure to Covid-19.
- Negative does not rule out COVID-19 infection.
- Its uses are limited to local government guidelines.
