

COMPANY PROFILE:

Uma Micron, Vadodara is a Gujarat based company that offers CONTRACT MICRONIZATION SERVICES dedicated to comply the needs of the pharmaceutical industry. The facility is at Ranoli, Vadodara, operates according to cGMP standards with more than 500 sq.st processing area and big warehouse facility.

Uma Micron understands and enjoys the entrepreneurial spirit inherent in the pharmaceutical industry. Our goal is to provide consistent, reliable and exceptional services to our customers with focus on particle size reduction.

We offer consistent, reliable and cost-effective contract micronization services for your small quantity up to large volume routine productions. In addition by our cooperation we will help you to reduce “time-to-market” for your R&D projects.

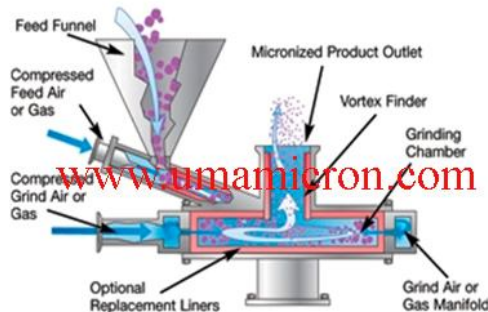

Our associate analytical laboratory, equipped with modern instrumentation - e.g. the Particle sizer - provides particle size determination.

- **Micronization:**

Jet micronization is used to mill particles below 5 microns. Particle to particle impact facilitated by air flow allows for producing particles less than 5 microns in size.

Significant benefits to this style of milling include:

- No Heat Build Up
- No Abrasion Generated Contamination

Our production scale Jet milling systems are located in a dedicated air locked process suite. The mills are fed via a loss-in-weight or volumetric feeders, micronized product is then collected in a reverse pulse dust collector, and discharged to product containers through a rotary air lock valve. This system design allows for significant product containment and recoveries of +99.9%.

Facility

Our modern facility includes

- State-of-the-Art Clean Room Technology including material and personal sluices
- Environmental Control for Storage & Processing areas
- Modern Jet Milling Area
- Cleaning verification program
- Laboratory services including Particle size testing.
- Effective Quality Management System in compliance with cGMP Documentation system

Uma micron offers flexible resources for R&D projects in small quantities and provides reliable contract services for small and large volume production quantities including complete shipping and documentation.
