

Aqua Planner India

We are pleased to introduce ourselves as one of the most competent organization in the field of Water Body Manufacturing and Automation of water flow with others features in terms of planning, designing, drawing, and execution of both civil and electro-mechanical component of the job.

We are associates with global leaders of swimming pool and Automation of fluid handling equipment. We are constantly upgrading ourselves in the tune of technical and commercial advancement of the industry. Our international associates are Astral Pool from Spain, Paintair from USA, Certikin from Spain and Aquanomics in India.

Apart from Swimming Pool and Musical Fountain, we have expertise in making of any kind of Sanitization Tunnel or Disinfection Gate. We are doing large scale of Water Treatment, Sewerage Treatment & Effluent Treatment. We are also expertise in some life style products- like SPA, Jacuzzi, Sauna and Steam Bath.

We have done prestigious projects in Eastern Region (a relevant list of project you can see in our web site). These projects were done either directly or under the main civil construction company. Our installation process are technically superior, commercially viable and at the same time with minimum maintenance hassle.

About Sanitization Tunnel or Disinfection Gate.

Why required ?

Currently we are sanitizing our hand by using alcohol based chemical or liquid soap, but after moving or passing from crowded area when we are going to our home, hospital, office or any other organization than we need to sanitized our whole body, Then only Sanitization Tunnel can disinfect our whole body.

Sanitization Process

Now a day there are two process of sanitization, as per experts opinions any kind of virus including COVID 19 can be die in 45 to 50 Degree, but now it is a process of research. As per Govt., Chemical Spray System can disinfect our body. And secondly alcohol based spray system is the best disinfection system.

Retention Time of Sanitization System

After getting information from some resources like website and govt. officials the average time of retention should be minimum 5 to 10 second only. We can adjust the retention timing as per requirement.

Nozzles Position

Every nozzle should be at a proper position by which entire room will be covered by steam or fog of chemical. Here we are suggesting two types of Machine. First Steam generator with small quantity of chemical. And second Fog nozzle with chemical by pressure pump.

Process of Exhaust

After using of sanitization room the steam or fog should be clear and floor should be clean automatically from room. So here we are providing the exhaust and drainage systems.

Confusion in present market

1. We required proper size of steam. If we don't provide the required volume of steam then it will not be useful. But some manufacturers are using small machines to reduce the cost.
2. Chemical spray nozzles and pump should be sufficient to cover the tunnel. Here we are providing 2 channels with 8 no's mist spray points.

Unique Selling Proposition of our system

We are providing standby facilities to cover any breakdown of machine.

Conclusion

If you are planning for a durable or really useable product then you have to go for a permanent solution of sanitization system. Here we are providing four types of tunnels to fulfill your requirements.
